This sequence encodes the human zuctin (ZUO1) protein. Fragments of the protein can be used in the in vitro method of the invention. The method is for culturing cells utilising stable macroscopic membranes formed by the self-assembly of amphiphilic peptides. The peptides are salt-induced to form insolubbe and protease-resistant protein filaments with a beta-sheet secondary structure. The membranes may be may be useful in a wide variety of medical, research, industrial and biomaterial applications such as slow-diffusion drug delivery systems, artificial skin and separation matrices. The membranes may be used to support in vitro cell attachment and growth and for supporting artificial rissue (e.g. for in vivo use as implants). They are particularly useful as experimental models for Alzheimer's disease and scrapie infection and so may be used in disease processes. Additionally, they may be used in this way to study liver cirrhosis, kidney amyloidosis and other protein conformational diseases. The membrane in the membrane/cell mixture conformational diseases. The membrane in the membrane and growth, (ii) self-assembles to form large, macroscopic membranes that are insoluble and stable in a queous solutions, serum and ethanol; (iii) salf-assembles to hard and stable in the method of the disease solutions, serum and ethanol; (iii) salf-assembles to hard and scould and stable in the method of the disease.
                                                         Membrane forming peptide; cell culturing; macroscopic membrane; ambliphilic peptide; alow-diffusion drug delivery system; cell growth; artificial tissue; scrapie infection, Alzheimer's disease; liver cirrhosis; kidney amyloidosis; protein conformational disease; human; zuotin; ZUO1; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    resistant to heat, alkaline/acidic pHs, chemical denaturants and proteolytic digestion; (iv) is non-cytotoxic and non-immunogenic; (v) is visible to the naked eye if dyed but is otherwise transparent; (vi) may

The invention relates to a macroscopic membrane formed by self-assembly of amphiphilic peptides in an aqueous solution containing monovalent metal cations. The peptides have alternating Mydrophobic and hydrophilic amino acids and are complementary and structurally compatible. The membranes are useful as biomaterial for medical products (e.g. sutures, artificial skin, internal linings), as vehicles for slow-diffusion drug delivery (preferably for protein type drugs e.g. erythropoietin, tissue type plasminogen activator, synthetic haemoglobin and insulin), as separation matrices (e.g. dialysis membranes, chromatography columns, filters for the removal of viruses and other microscopic contaminants), for other uses requiring permeable and water-insoluble material (e.g. for culturing cell monolayers including differentiated cells and/or extaitified cell layers), for the preparation of very thin and transparent fabric and as a model system for investigating the properties of biological protein structures and providing insights into the pathology and proteins and proteinaceous structures (e.g. Alzheimer's disease, scrapie infection and in origin of life studies related to cell membranes and cellular comparatementalisation). The present sequence is yeast zuctin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 732

The invention relates to a method for in vitro cell culture which involves adding a macroscopic membrane that is formed by self-assembly of amphiphilic peptide in an aqueous solution containing monovalent metal cations to a cell culture medium comprising cells, thus forming a membrane/culture mixture, maintaining the mixture under conditions a sufficient for cell growth. The invention also relates to EAKI6 peptide carried from yeast E-DNA binding protein (zuctin). Zuctin incorporated into the macroscopic membranes are useful in biomaterial applications such as medical products (e.g., sutures), artificial skin or internal linings, slow-diffusion drug delivery systems supports for in vitro cell growth or culture and support for artificial tissue for in vitro use, as slow-diffusion drug delivery vehicle for delivering protein-type drugs conductive biopolymer for culturing cell monolayers, for promoting cell adhesion and migration, useful as experimental models for Alzhaimer's disease and scrapic infection. The present sequence is yeast zuctin DNA. This sequence is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   672

monovalent metal cations, where the peptides have alternating hydrophobic and hydrophilic anino acids and are complementary and structurally canno acids and are complementary and structurally compatible, to a cell culture medium comprising cells, thus forming a membrane/culture mixture, and maintaining the mixture under conditions is sufficient for cell growth. (MI) is useful for culturing a macroscopic membrane utilised in biomaterial applications e.g., slow-diffusion drug delivery systems, artificial skin or separation matrices, or as delivery systems, artificial skin or separation matrices, or as cyperimental models for Alzheimer's disease and scrapic infection e.g., liver cirrhosis, kidney amyloidosis, or other protein conformational diseases. (MI) enables in vitro culturing of macroscopic membrane that is stable in aqueous solution, serum and ethanol, highly resistant to heat, alkaline and acidic ph, chemical denaturants and proteolytic diseasin, and is non-cycloxic. This sequence encodes yeast DNA binding protein conformation, and is non-cycloxic. This sequence encodes yeast DNA binding protein conformation and acidic philic peptides capable of forming membrane can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1023
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1083

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the protein and coding sequences of biotin synthase enzymes from barley, wheat, maize, soybean and the prickly poppy. These sequences can be used to produce transgenic plants which express different levels of the gene, or express it at different times in plant development. They can also be used as a target in the production of herbicides. The present sequence is a maize biotin synthase cDNA obtained from clone cholc.pk009.j14, which was derived from a maize embryo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       wew polypeptides, useful as targets for herbicide discovery, and as probes for genetic and physical mapping of genes of which they are part, or creating transgenic plants, comprises biotin synthase polypeptides and encoding polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AACACCTGGACCAAAGAAGAATTAAAGCTATATATGACACACCACTCATGGACTTGATG 261

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      441
                                                                                                                                                                                                                                                                                                                      The invention relates to a novel isolated polynucleotide encoding a first polypeptide or a third polypeptide where the first or third polypeptide is a biotin synthase. The methods and compositions of the invention may be useful in plant molecular biology and breading, particularly in the production of altered levels of biotin synthase in plants and seeds. The polypeptides may be used as a target to facilitate the design and/or identification of inhibitors of these enzymes that may be useful as herbicides. Furthermore, the polypuclectides may be used as probes for genetically and physically mapping the genes of which they are a part. The current sequence is that of the corn biotin synthase-related CDNA of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   321
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TTTCACGGGGCTCAGGTCCAGAAATGTCCATAAATTCAGAGAAGTGCAGCAATGCACA 370

New polypeptides, useful as targets for herbicide discovery, and as probes for genetic and physical mapping of genes of which they are, part, or creating transgenic plants, comprises biotin synthase polypeptides and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of biotin synthase enzymes from barley, wheat, maize, soybean and the prickly poppy. These sequences can be used to produce transgenic plants which express different levels of the gene, or express it at different times in plant development. They can also be used as a target in the production of herbicides. The present sequence is a barley biotin synthase CDNA obtained from clone bsh1.pk0005.d10, which was derived from a barley
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    273 TICCACGGGGCTCAAGTCCATAGGAATGTCCATAAATTTAGAGAAGTGCAAATATGCACA 332

The invention relates to a novel isolated polynucleotide encoding a first polypeptide or a third polypeptide where the first or third polypeptide is a biotin synthase. The methods and compositions of the invention may be useful in plant molecular biology and breeding, particularly in the production of altered levels of biotin synthase in plants and seeds. The polypeptides may be used as a target to facilitate the design and/or identification of inhibitors of these enzymes that may be useful as herbicides. Furthermore, the polymucleotides may be used as probes for genetically and physically mapping the genes of which they are a part.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        332

```
The present invention provides the protein and coding sequences of biotin synthase enzymes from barley, wheat, maize, soybean and the prickly poppy. These sequences can be used to produce transgenic plants which express different levels of the gene, or express it at different times in plant development. They can also be used as a target in the production of herbicides. The present sequence is a maize biotin synthase cDNA obtained from clone cca.pk0012.g11:fis
probes for genetic and physical mapping of genes of which they are part, or creating transgenic plants, comprises biotin synthase polypeptides and

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 2698, Application US/09328352

Patent No. 6562958

GREERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT RILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

SEQ ID NO 2698
LENGTH: 1017
                                                                                                                                                                                                                                                                                                                                                                         1041
